

- Ultra-Efficient Fertilizer
- Empowering Agriculture for the Future
- **1 KG FEEDS 200 HECTARES**
- Cut Fertilizer Use & Cut CO2 Emissions
- Boosting Yields
- Reduce Water Consumption Up to 70%

Blog Post Green Bull One

- ▶ Green Bull One a **Fertilizer Revolution** That Can Change the World
- ▶ Agriculture stands at a crossroads. With the world population rising and environmental pressures mounting, **we need smarter, more sustainable ways to grow our food.**
- ▶ One of the biggest contributors to greenhouse gas emissions in farming today is the **nitrogen fertilizers. widespread use of conventional** These products, while effective, **come at a high cost to our planet both in terms of production emissions and environmental pollution.**

Let's take it

▶ The Green Bull One **Advantage Revolutionizing Agriculture.**

▶ **Current Situation:**

- Conventional nitrogen fertilizers emit up to 100+ kg CO₂e/ha
- Require massive production, storage, and transport
- Costly and harmful to ecosystems

▶ **Solution with Green Bull One Fertilizer:**

- 1 kg = 200 hectares
- Total emissions down to 0.0073 kg CO₂e/ha
- Emission reduction: 1.25 Gt → 0.000055 Gt CO₂e
- Cut transport by over 99%
- Cost reduction \$50–150 per hectare (Nitrogen) down to \$9 per hectare.
- Just 7,500 tones needed to cover 1.5B hectares

Enter Green Bull One Fertilizer

- ▶ **Green Bull One is a groundbreaking mineral fertilizer** that delivers the same crop results while requiring **only a fraction of the quantity**. Just **1 kilogram** of **Green Bull One** fertilizer is enough to cover a remarkable **200 hectares**. This radical efficiency brings enormous benefits:
- ▶ **Drastically Reduced Emissions:**
 - Traditional nitrogen fertilizers emit between 25 and 100+ kg of CO₂e per hectare. In contrast, **Green Bull One** fertilizer emits just **0.0073 kg CO₂e per hectare**, including production, transport, and field use.
- ▶ **Lower Transportation Impact:**
 - Because you need so **much less, transport emissions** are nearly eliminated. With just 7,500 tons of Green Bull One fertilizer, 1.5 billion hectares can be treated.

Cost-Effective Future Farming

- ▶ At just **\$9 per hectare**, it's also significantly cheaper than nitrogen (**\$50–150/ha**) and urea **\$30 – 100 hectare**.
- ▶ It's a Global Opportunity if the world switched to **Cost-Effective** fertilizer, global fertilizer-related emissions could **plummet from 1.25 giga tones of CO₂e to just 0.000055 giga tones**.
- ▶ That is not just an improvement it's a transformation. The transition to low-emission, high-efficiency fertilizers like **Cost-Effective** isn't just a technical upgrade. It's a moral imperative. **This is our opportunity to feed the world while healing the planet.**
